

Radial compensation

- To avoid gaps and sharp edges on T-connections between two profiles using a central bolt or quick connector (note spacing of hole from the face of the profile)
- The slot segments can be broken out in order to fix surface elements in the slot
- Important note: the load carrying capacity of the profile connection is reduced when using radial compensation!

Product description

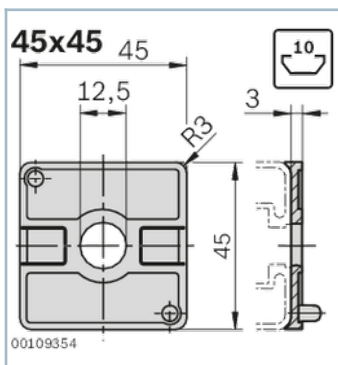

Technical data

	Material
Radial compensation 45x45	PA; signal gray RAL 7004

Dimensions

Radial compensation 45x45
