

## XLean – Accessories

- Section link  
Bridge  
Flexible bridge

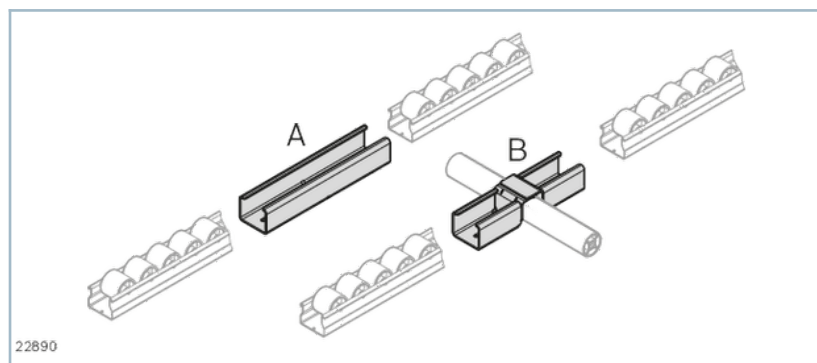

HowTo Video

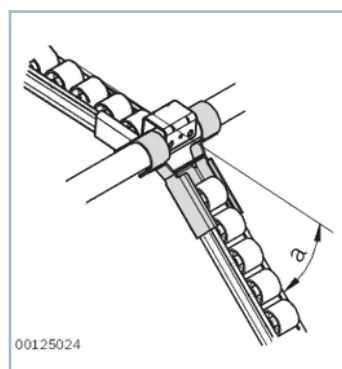

- Section link for connecting two XLean roller sections together
- Bridge for connecting two XLean roller sections and simultaneously mounting them to the tubular cross tie. This increases the rigidity of the system
- Flexible bridge for easy material supply in the flow rack system. The container is stopped by a rail holder with stop and is moved manually to the inclined position. Maximum inclination ( $a_{\max}$ ) in relation to the horizontals:
  - with tubular cross tie:  $a_{\max} = 40^\circ$
- Mount to secure the roller section to an additional tubular cross tie. The additional tubular cross tie increases the stability of the system.
- Brake for bringing containers to a stop gently
- Cover cap for covering open ends of XLean roller sections
