

Section profile STS open

Product description

The open construction of the section profile (**A**) allows dirt or foreign particles to be removed directly. Two open section profiles connected by cross connectors are needed to construct a conveyor section. A support profile is necessary for sizes 160 and up.

- Same profile cross-section across all sizes (65-320)

The cross connector (**B**) is the connection of two profile halves to make an open section profile. The size is determined by using cross connectors of different lengths.

From size 160, a support profile (**C**) is required. The support profile is fastened to the existing cross connectors.

Section profile STS open (A)

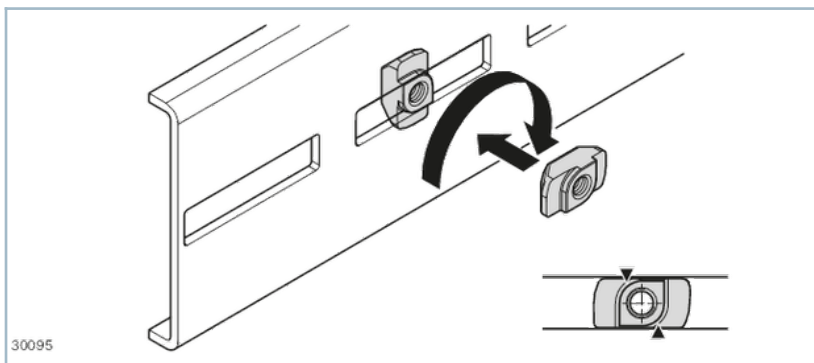

- Elongated holes for attaching a drive/return unit, curves, lateral guides, leg sets, or other accessories
- Simple to clean

STS cross connector (B)

- Cross connector with mounting option for support profile

STS support profile (C)

- With elongated holes for fastening in regular intervals
- Plug-through stainless steel T-nuts as mounting option on the section profile

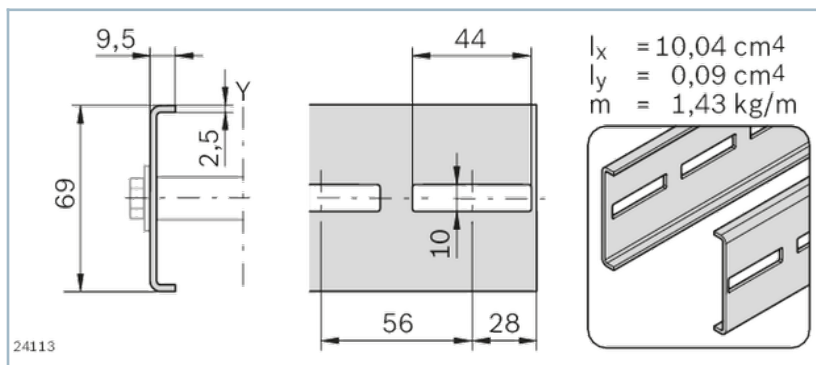

Standard element for secure connection of accessory parts to the section profile

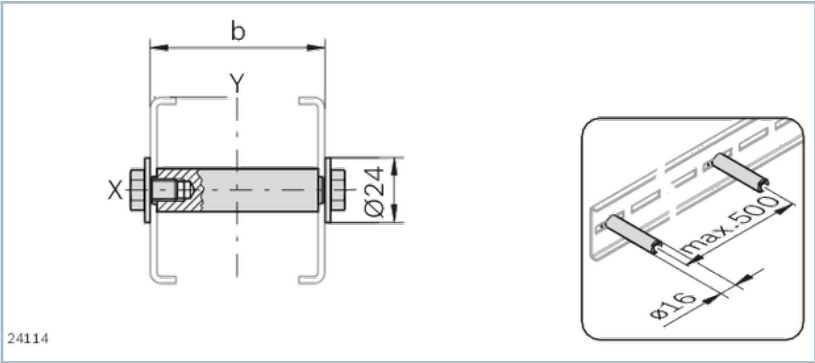

Note: MGE T-nuts do not fit in the STS section profile.

Dimensions

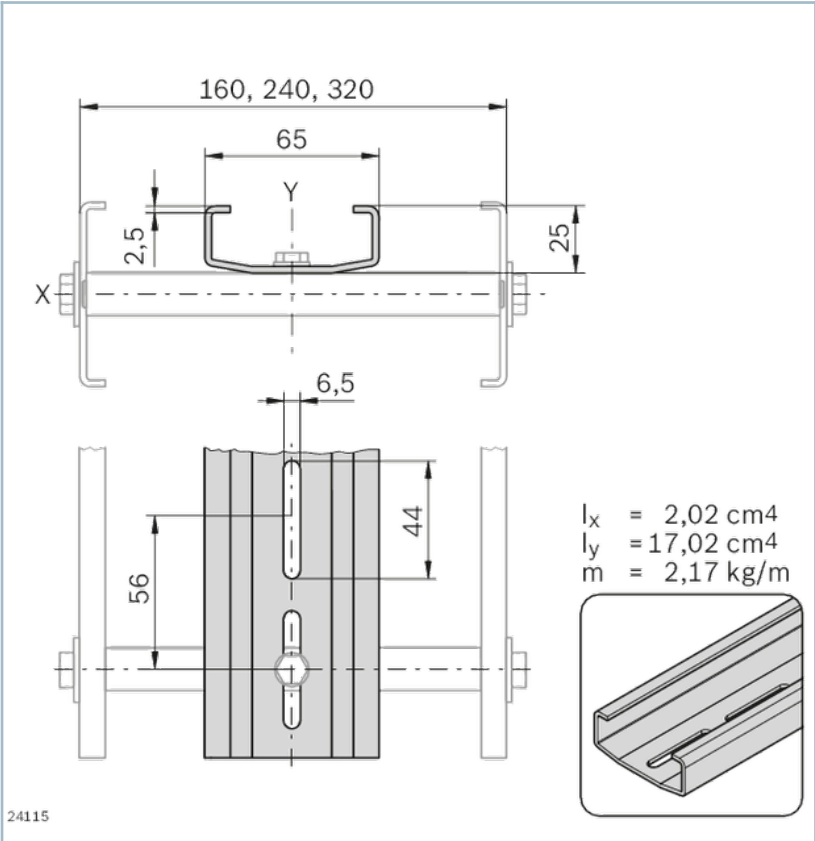

Section profile VFplus STS open

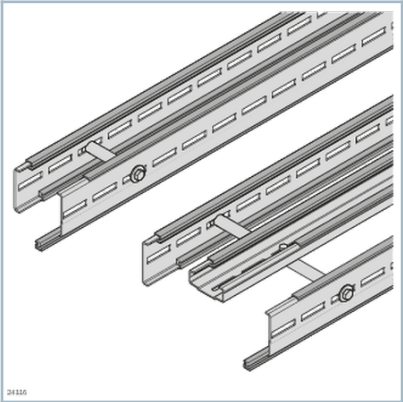

Cross connector STS

Support profile VF*plus* STS

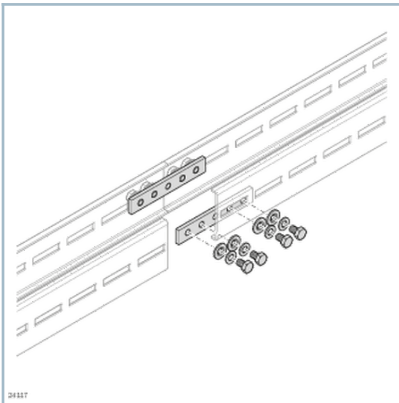

Accessories

Slide rail

- Easy assembly - simply clip onto the section profile
- Secured against axial shifting due to lateral bolting

Profile connector

- Two profile connectors are used to connect the end faces of the section profiles
